Low Rate Corn Bowl Now Available for ExactEmerge™ Planters

From its inception, ExactEmerge has helped growers hit the critical planting window with increased speeds, while maintaining accurate seed placement. ExactEmerge technology can now be experienced by more growers as we continue to introduce new seed bowls for additional crop types and farming practices.

As such, we are excited to introduce the A109781 low rate corn bowl. With this new seed bowl, growers of dryland corn in semi-arid climates now have a way to use ExactEmerge to plant corn at lower populations (typically 10,000 to 20,000 seeds/acre, on 30 inch spacings).

Features:

- Single row of 16 cells, 4.35mm in diameter
- Uses the standard corn knockout wheel AA85925

A109781 Low Rate Corn Bowl

Target Customers:

- Dryland corn growers in semi-arid climates (such as in Nebraska, Colorado and Kansas) with population targets of 10,000 to 20,000 seeds/acre, on 30 inch spacings

Compatibility:

- ExactEmerge Planters
- Recommended to use mobile run-off using CCS system to verify CCS and vacuum settings
